DRIDI NADA

SOFTWARE ENGINEERING

Monastir, Tunisie | Tel: 25755988 | Nadda.dridi@gmail.com
www.linkedin.com/in/nada-dridi- | github.com/nada-Dridi-2021/

Software engineer passionate about building clean, reliable applications and solving real problems through code. I enjoy working across the full stack, adapting quickly to new tools and environments, and collaborating closely with a team to bring ideas to life. I'm looking for a role where I can keep learning, grow my skills, and contribute meaningfully to ambitious projects.

PROFESSIONAL EXPERIENCE

Final-Year Project: AI-Enhanced E-Learning Platform «Luminos» **Mar 2026 – Aug 2026**
Grow Up Technologies
- Architected a full-stack e-learning platform (React, Node.js/Express, PostgreSQL/Prisma) for learners and instructors, covering 6 core modules: courses, progress tracking, certificates, Stripe payments, blog, and an AI chatbot.
- Integrated 2 LLM providers (Google Gemini and Groq) to auto-generate quizzes, flashcards, and video summaries from course content, removing manual content authoring for instructors.
- Safeguarded reliability with Jest unit tests and Playwright/Gherkin end-to-end tests, and shipped the app through a Docker-based cloud deployment.

Freelance: Frontend Developer **Sep 2025 – Jan 2026**
- Delivered a bilingual (EN/FR) React/Vite dashboard that lets PadelTunisia center owners manage centers, courts, and reservations, secured with JWT authentication and custom court-availability rules on the existing APIs.

Summer Internship: Design and development of a padel court booking application **Jun 2025 – Aug 2025**
Grow Up Technologies
- Developed PadelTunisia, a cross-platform app (React Native, Expo Router, TypeScript) serving 3 platforms (iOS, Android, web) from a single codebase, backed by a Node.js/Express/MongoDB REST API secured via JWT and Google OAuth.
- Engineered a court-booking engine with scheduling and double-booking conflict detection, plus team management and skill-based match creation.

Final-Year Project: Monitoring dashboard plugin for the P-GUARD robot **Feb 2023 – May 2023**
Enova Robotics Sousse
- Created a monitoring dashboard plugin in C#/WPF, integrated into Milestone XProtect VMS through the MIP SDK, consolidating a 2-computer robot control setup into 1 unified interface that streams real-time telemetry (battery, navigation, camera) via WebSockets into MongoDB.
- Implemented historical performance charts with date-range filtering, PDF report export, automated low-battery and connection alerts, and an emergency command bar (lights, camera, manual override, return-to-home) for remote robot control.

Summer Internship: Study buddy networking app **Jul 2022 – Aug 2022**
Alpha Computing and Consulting, Mahdia
- Co-developed a study app in a team environment that helps students find fellow students to study with and network with study buddies.
- Contributed to the study-partner matching and networking features, taking the app from idea to working product within the 2-month internship.

ACADEMIC PROJECTS

StageLink: Internship Platform for Tunisian Students
- Launched a web platform (React, Node.js, Express, MongoDB) that centralizes internship offers for Tunisian students, with advanced search, online applications, application tracking, CV generation, and an admin back office.

Task Management App (Trello-like)
- Engineered the complete REST API backend with Node.js and Express.js, including secure user authentication and collaborative task management for team workflows.

Recipe App: Flutter Mobile Application
- Created a cross-platform mobile app with Flutter and Firebase, featuring user authentication (Firebase Auth) and real-time recipe management with Firestore.

Test Automation: QA Project
- Automated 15+ Gherkin test scenarios on an e-commerce demo site with a Java, Selenium WebDriver, and Cucumber (BDD) framework using the Page Object Model, producing HTML and JSON test reports.

Extremist Content Detection: NLP Text Classification
- Trained an NLP classifier in Python that detects extremist content in social media messages, using NLTK preprocessing, TF-IDF features, and a class-balanced Logistic Regression model that returns a label and confidence score.

EDUCATION

Engineering Degree in Software Engineering **2023 – 2026**
EPI — International Polydisciplinary School

Bachelor's Degree in Computer Systems Engineering (Embedded Systems and IoT) **2019 – 2023**
ISI Mahdia — Higher Institute of Computer Science of Mahdia

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, TypeScript, C, Python
- **Databases & Querying:** MongoDB, SQL, PostgreSQL
- **Frameworks & Libraries:** Spring Boot, Express.js, React.js, React Native, Expo, Flutter, .NET
- **Business Intelligence & Cloud:** Power BI, Docker
- **Software Quality & Testing:** Selenium, Jest, Playwright, Postman
- **Documentation & Development Tools:** Git, LaTeX

ADDITIONAL INFORMATION

Languages: English (C1), French (B2), Arabic (native), German (A2)
Soft Skills: Problem solving, adaptability, teamwork, perseverance, autonomy
